

## CLEANING ACCESSORIES

### FIBER OPTIC CLEANING ACCESSORIES

#### CARE & CLEANING OF FO CONNECTORS

A properly functioning fiber optic network requires clinical cleanliness of all fiber optic connections. A single particle of dust or fingerprint can scatter enough optical power from the core to take down an entire link. While not in use all fiber connector tips should be covered with dust caps to prevent damage such as scratches and pits from forming on the connector ends. Pits and scratches on the surface of a connector can migrate when mated to another connector consequentially spreading damage and requiring the re-termination on both fibers.

#### FIBER OPTIC CONNECTOR CLEANER

- » Cleans all standard 2.5mm and 1.25mm connectors (including SC, FC, ST, MU, LC)
- » Specially formulated anti-static micro-fiber cloth
- » Compact size for Hand-held operating
- » Best Cleaning Effect by one time wipe
- » Cleaning time Save
- » Dry Special Anti -Static Microfiber Fabric without any residues and Lint and Solvent Free
- » Easy Replacement Reel
- » For Cleaning of dust /oil/particle/alcohol/etc

#### ONE CLICK CLEANER 1.25MM FERRULES

- » Cleans 1.25mm ferrules (LC, MU)
- » Simple pushing motion to engage tool
- » Audible CLICK to alert the operator when tool is fully engaged
- » Over 525+ engagements per unit
- » Dry cleaning strand eliminates the need for solvents to be effective
- » Crush resistant to over 250N
- » Impact resistant to survive drops over 1.5M
